

Zoomies
— SELF-HOSTED GIT RUNNERS —

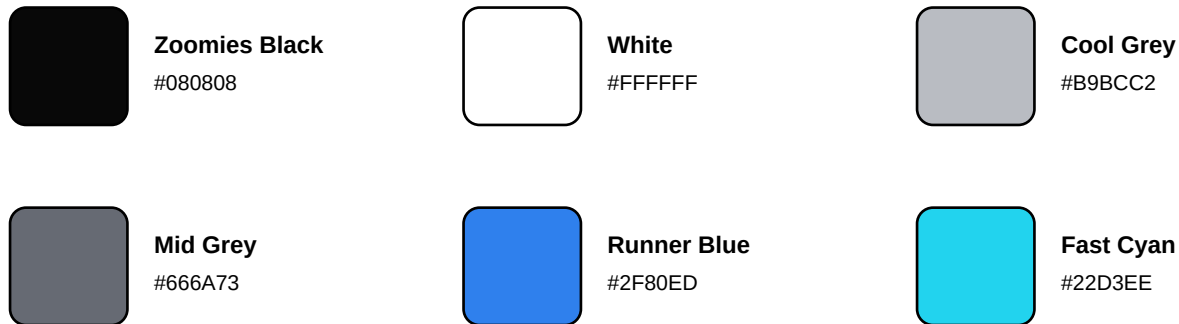

Brand Guide

Open-source self-hosted Git runners

Identity

Zoomies is fast, playful and technical without feeling corporate. The circular cocker-spaniel motion mark turns the familiar idea of a dog doing zoomies into a visual metaphor for jobs and runners moving quickly.

Core palette

Typography

Use Inter for the product UI and documentation, with Geist Sans or system-ui as fallbacks. Keep the approved wordmark artwork intact rather than typesetting a replacement.

Usage

Use the full lockup for README files, websites and project pages. Use the dog mark alone for app icons, favicons, repository avatars and compact navigation. Keep generous clear space and do not stretch, recolour individual dog elements, rotate, or add effects.

Asset examples

Primary mark

App icon / avatar / favicon

White knockout

Dark or coloured backgrounds

Wordmark lockup

Website headers / README / launch artwork

Note: the SVG files in this pack are convenience wrappers around raster artwork, not true vector redraws. For large-format print or merchandise, use the master as the reference for a proper vector trace/redraw.
